

Engineered Packages

Foam Proportioning Packages

Fire Engineering
Pty Limited

Description

Foam proportioning skids are designed for a wide range of applications and include foam tanks made from a variety of materials and to a range of design codes. Skids incorporate a range of different proportioning technologies including line proportioners (inline inductors) and turbine proportioners as well as deluge valves and instrumentation.

Skids are designed to suit the environmental conditions appropriate for the project.

Orion has decades of experience designing and building foam proportioning systems and has a wealth of knowledge covering foam concentrate properties and foam proportioning technologies that ensure a project is successfully completed.

The properties of foam concentrates can substantially impact on the system design and there are significant pitfalls particularly when using protein based foam concentrates and high viscosity foam concentrates.

ORION FIRE ENGINEERING PTY LIMITED
