## Turbine Proportioner

## Description

The Orion Turbine Proportioner is a water-driven positive displacement foam pump. It uses the flow of water from the firewater piping to drive an integrated foam pump, giving high foam proportioning accuracy across the entire flow range of the unit at a range of inlet pressures. For 3\% proportioning.

The Orion TP-4 includes a bypass feature to allow foam testing and commissioning to take place without having in inject foam into your water.

Key Features
Key features that make these unit advantageous are:

- Suitable for use with seawater and freshwater
- No power source required
- Foam bypass loop for easy commissioning and testing
- Suitable for use in hazardous areas
- Suitable for a wide flow range
- Low Maintenance

## Operation

No special start up procedures are required, simply turn on the firewater supply and the turbine proportioner will begin injecting the foam.

## Performance Graph

|  |  | Orion TP-4 |
| :---: | :---: | :---: |
| $\begin{array}{\|l} \hline \frac{E}{0} \\ \text { OL } \\ 0 \\ \hline \end{array}$ | Operating Flow Rate (Ipm) | 600-3,200* |
|  | Operating Pressure Range (kPa) | 600-1,200* |
|  | Body | Bronze LG2 |
|  | Rotors | SS316, Coated |
|  | Timing Gears | Bronze AB2 |
|  | Foam Gears | Foam resistant polymer |
|  | Fasteners | SS316 |
