

New Website Launched

As part of our constant effort to keep our customers updated with our product range we have re-worked our website to make it easier to navigate.

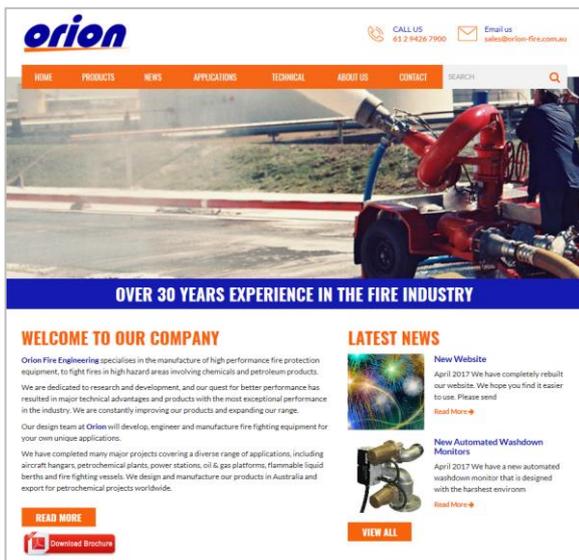

To view the new website, click on the link below:

www.orion-fire.com.au

Not only does this website include our product ranges, it now also includes technical articles on many common questions within the industry. Currently this section covers a number of topics on foam concentrate, but over time this will be expanded to cover other areas of the industry. The technical articles can be found at the below link:

<http://www.orion-fire.com.au/technical/>

As with all websites, our aim is to continually update the content so be sure to check back regularly!

New LinkedIn Profile

As another way of keeping our customers updated with our products, Orion now have a LinkedIn account.

Click on the link below to be directed to our page, or alternatively search for Orion Fire Engineering.

First Automated Monitor Dispatched

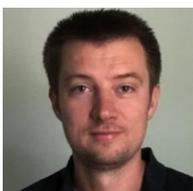

Recently we revealed our Commando trainable monitors, a new range of monitors which are fully automated. The first order for these monitors has been dispatched to a coal facility in Queensland.

On top of the standard 316SS monitor, the customer optioned a 316SS junction box & 316SS flexible conduit for cabling. The monitors are designed to last in harsh environments.

The monitor is trained and controlled through an Ethernet connection from a web browser or via a joystick controller.

Further information on these monitors can be found on our website, or by clicking on the link below:
